INTRODUCTION

The purpose of *A Guide to Writing Kanji and Kana* is to help students of Japanese master writing the two *kana* syllabaries (46 hiragana and 46 katakana) and the 1,945 basic characters (Jōyō Kanji) officially recommended for daily use.

With so many characters, it is important that you study them systematically, in a carefully thought-out progression. Most textbooks for learning Japanese, however, do not offer an introduction to Japanese script based on sound didactic principles. *A Guide to Writing Kanji and Kana* answers the need for a step-by-step presentation of characters by following the system developed in the book *Kanji & Kana*¹. Also, up to three basic graphical elements (graphemes) indicating its meaning and/or pronunciation are listed for each kanji. Furthermore, the characters are taught not in isolation but as parts of important compounds that use only characters that have been introduced earlier.

Characters are presented in brush, pen, and printed forms. Each character in pen form is printed in light gray for you to trace over. These gray lines will guide your hand the first time you try writing a new character and will help you quickly develop a feel for the proper proportions.

When practicing writing the characters,

don't forget that they should be written to fit into squares, either real or imaginary, of exactly the same size. *A Guide to Writing Kanji and Kana* has convenient, pre-printed squares: large and normal size for all kana and the first 778 kanji, and normal size for kanji 779–1,945.

When memorizing kanji, use the same method as the one recommended in the Introduction of Book 1 for the syllabaries. For kanji, look at the **basic graphical elements** (graphemes) the entry character is made up of; you will soon notice that all kanji are constructed from relatively few basic elements. These elements often indicate the meaning and/or pronunciation of the kanji. Instead of following the order of kanji presented in this book, you can choose any order you like. You might, for example, select the order in which kanji are introduced in the textbook you're using in class. The disadvantage to this, however, is that the words and compounds will then contain characters that you have not yet learned.

The kanji are fully indexed by *on-kun* readings. The *Index* in Book 1 lists all kanji contained in that volume. The *General Index* at the end of Book 2 lists all kanji contained in both volumes, grouping together kanji that share the same reading and a common graphical element.

1. The kanji in brush form, with numbers showing stroke order positioned at the beginning of each stroke.
2. Three squares with the kanji in pen form, printed in light gray and serving as a practice template to trace over.
3. Empty squares in which to write the entry kanji and compounds.
4. Number of the kanji in these manuals.
5. a. Radical with its number-and-letter “descriptor”, under which the kanji is listed in the *Japanese Character Dictionary*².
b. Up to three graphemes (basic elements) with their number-and-letter “descriptor”, under which the kanji

can be retrieved in *SUNRISE Script*.³

A numeral from 2 to 4 added to the descriptor indicates how many times that radical or grapheme is contained in the kanji. If the radical is not a grapheme, it is put in parentheses.

6. *On* readings, in capital italics; *kun* readings, in lowercase italics; readings that are infrequent or used only in special cases, in brackets; *okurigana* (part of a word that is written in kana), in parentheses; English meanings. All officially recognized readings of the kanji are listed.
7. Compounds, with romanization, meanings, and cross-reference numbers to the main entries for other kanji in the compound.
